In recent years, there have been many new approaches to data networking protocols, both industry standard and vendor proprietary. In this chapter, we will begin with an overview of conventional networking protocols, such as the Spanning Tree Protocol and multichassis link aggregation, and network design approaches like equal cost multipath spine–leaf. We will then review several more recent proposals for addressing the requirements of a flattened, Layer 2 network infrastructure. We discuss Transparent Interconnection of Lots of Links (TRILL) and Shortest Path Bridging, as well as both industry standard and proprietary network options including Open Data Center Interoperable Network (ODIN), Qfabric, FabricPath, and Virtual Cluster Switching (VCS). Overlays including Virtual Extensible LAN (VXLAN), Network Virtualization Generic Routing Encapsulation (NVGRE), Distributed Overlay Virtual Ethernet (DOVE), and others will also be discussed.
