Surface Chemistry presents the proceedings of the Second Scandinavian Symposium on Surface Activity, held in Stockholm, Sweden on November 18-19, 1964. This book discusses the important applications of surface chemistry in many problems of both fundamental and applied research.

Organized into 25 chapters, this compilation of papers begins with an overview of the adsorption of mixed collector systems onto minerals chosen for their different surface energies. This text then describes the bonding of amine to the reactive residual matter on the mineral surface. Other chapters consider the solubilities of some 30 hormonal steroids in aqueous solutions of three association colloids of various types. This book discusses as well the relationships between chemical structure and biological degradation of surfactants. The final chapter deals with several properties of aqueous emulsions and of foam, which are determined by the stability of thin aqueous films against rupture.

This book is a valuable resource for chemists.
