Zero Kelvin

Richard Norman

Zero Kelvin Richard Norman

Present-day astronomy, vast, complex, is looking through darkness to distant objects and times. Yet its discoveries aren't exclusively scientific: from the moons of Pluto to the Doppler effect, the night sky screens a place where math meets myth. Now, in *Zero Kelvin*, in scenes that shift from the mountains of Goma to the mountains of the moon, from galaxies that feast upon their neighbours to a solar sail unfurling above Earth's orbit, Richard Norman's poetry probes both newly glimpsed corners of the universe, and the myths which bring them into focus.

Experiment

It is a human urge—
to orbit backwards at great speed.
Experimentally, you do it
and then the crack of lightning,
the open-ended snowflake, splits the sky.
Just as the sculptor cut the fat off space,
you going backwards renders time.
Seconds drop like filings
when a magnet is turned off.

Praise for *Zero Kelvin*

"All at once the elements collapse and expand, become inseparable and remote, beautiful and terrifying – this is what Richard Norman's poems do to us. We feel stars, those tiny suns, as words blazing through the page; like dust or sand they leave a residue in our thoughts, worlds deep, so we might inadvertently carry them to work, or to the bed of a lover. Here is where language consumes us, absolute and intangible, between reality and myth." —**Leigh Kotsildis, author of *Hypotheticals***
