Genome Mapping and Molecular Breeding in Plants presents the current status of the elucidation and improvement of plant genomes of economic interest. The focus is on genetic and physical mapping, positioning, cloning, monitoring of desirable genes by molecular breeding and the most recent advances in genomics. The series comprises seven volumes: Cereals and Millets; Oilseeds; Pulses, Sugar and Tuber Crops; Fruits and Nuts; Vegetables; Technical Crops; and Forest Trees.

Forest trees cover one third of the global land surface, constitute many ecosystems and play a pivotal role in the world economy. Despite their importance in the economy, ecology and environment, genetic analysis and breeding efforts have lagged behind. Presented here are chapters on Populus trees, pines, Fagaceae trees, eucalypts, spruces, Douglas fir and black walnut, and a first-ever detailed review of Cryptomeria japonica. Innovative strategies to address the inherent problems of genome analysis of tree species are thoroughly discussed.

From reader reviews:

Mamie Perkins:

The book Forest Trees: 7 (Genome Mapping and Molecular Breeding in Plants) can give more knowledge and information about everything you want. So why must we leave a good thing like a book Forest Trees: 7 (Genome Mapping and Molecular Breeding in Plants)? Wide variety you have a different opinion about publication. But one aim that will book can give many info for us. It is absolutely proper. Right now, try to closer together with your book. Knowledge or data that you take for that, it is possible to give for each other; you may share all of these. Book Forest Trees: 7 (Genome Mapping and Molecular Breeding in Plants) has simple shape however you know: it has great and massive function for you. You can look the enormous world by start and read a publication. So it is very wonderful.

Ramona Wegener:

Many people spending their time frame by playing outside together with friends, fun activity having family or just watching TV the entire day.
