Football Physics: The Science of the Game Timothy Gay

Do you cringe when a linebacker flattens a quarterback? Hold your breath when a field goal sails toward the goalpost? Watch in amazement as a touchdown pass spirals down the field? Behind those big hits, long kicks, and sensational throws is a science that will give you a whole new perspective on the game of football.

A combination of Stephen Hawking and Mike Ditka, physicist and football fan Timothy Gay breaks down the fundamental laws of physics that govern America's most exciting spectator sport. To illustrate the science behind the game, he highlights some of football's recent memorable moments, along with legendary feats from the likes of Franco Harris and Joe Montana.

Did you Know?

- Newton's Second Law of Physics proves that Dick Butkus hits running backs with the force of a small killer whale.
- The average force with which a football must be kicked during kickoff is 450 lbs. But for an instant, the force may be as much as a ton.
- Shaun Rogers, firing off the line of scrimmage, can develop as much as four horsepower by himself.
